## *Access Control Made Easy!*

### **INTRODUCING TEAM AVS EZ-DOOR**

Team AVS EZ-Door Managed Access Control program delivers a secure, efficient single door to multi-door electronic access service without having to invest in and install a computer and software at your location to manage the system.

### **HOSTED & MANAGED SOLUTION**

Team AVS will provide a “hosted and managed” access control service. Team AVS will administer all programming, cardholder database management, and report services for you. This service is intended for the end user who does not have the time, resources, patience, or desire to manage an access control system.

### **HOSTED ONLY SOLUTION**

Team AVS will provide a “hosted only” access control service. This service is intended for customers who recognize the value of eliminating the computer, software, and associated maintenance from their location, but prefer to manage the access control database themselves. This service allows the customer to gain entry to the database from any internet connected PC 24 hours a day/7 days a week/ 365 days a year.

### **THE MANAGED ACCESS ADVANTAGE**

Traditional access control systems require the installation of a dedicated computer and access control software at the user’s location. They require the user to learn how to use the software to set schedules, create door groups, add persons to the access control database, run reports, initiate database backups, and provide day-to-day management of the access control system. Team AVS EZ-Door eliminates these requirements and provides our customers a secure facility without having to develop access control expertise. And, with the reduced costs of the program, doors once considered too expensive for access control can now be included as part of your security program.
